

Use of Centrifuge

1. Turn on power. Unlock door. Put tube in. Be sure it is balanced. Lock door.
2. Set time (usually 5 minutes).
3. Set speed to 3.1 on dial (500rpm). This is a good speed to pellet Fibroblast at.
4. Adjust the speed up or down as needed.
5. Close lid, lock closed and press start button.
5. When red light at left comes on, it is finished. Unlock and open the centrifuge.
6. Lock it and turn off the power when done.
